

**Launch of new Website:
Everything you always wanted to know about genomics!**

A showcase for Québec's life sciences researchers

Montreal, June 11, 2012 – Marc LePage, President and CEO of Génome Québec, is pleased to announce the official launch of a new Website that offers the general public information about genomics and the work done by Québec genomics researchers.

Since 2001, Génome Québec and its partners have invested more than 500 million dollars in genomics research and technology. According to Marie-Kym Brisson, Vice President, Public Affairs and Communications, "We want to tell Quebeckers about the major accomplishments being made right here in our province, as there is so much to be proud of! Yet, when I talk about genomics, the reaction I get is: geno... what? That has to change", she said with a big smile. "The life sciences sector is undergoing a transformation; our mandate is to raise public awareness of the accomplishments in genomics and their practical applications. The issues and related hope they inspire matter to us all", she concluded.

Purpose of the [Website](#)

"... the site will provide a window on our research activities and work", stated John MacKay, a forestry genomics researcher at Université Laval. "It is aimed at anyone who has an interest in the developments of genomics research and its applications in the areas of health, forestry and the environment, as well as students and journalists who want to know more about what is currently happening in the industry", he added.

Along with MacKay, several other researchers have agreed to present the results of their work using clear and accessible language. Information capsules will be uploaded to the site regularly.

About Génome Québec

Since May 2000, Génome Québec has been the driving force behind the development of genomics in Québec. By supporting over 60 projects and 750 researchers and managing the operations of the McGill University and Génome Québec Innovation Centre, Génome Québec is helping to accelerate the discovery of new applications for genomics in strategic areas, such as human health, forestry and the environment.

The funds invested by Génome Québec are provided by the Ministry of Economic Development, Innovation and Export Trade of Québec (MDEIE), the Government of Canada through Genome Canada and private partners.
